

## Create Samba users & create shared group

- create Linux users (as root)

```
# useradd -m -s /bin/false user1 (-m create homedir, -s nologin)
# passwd user1

# useradd -m -s /bin/false user2
# passwd user2
```

- create Linux group (as root)

```
# useradd -m -s /bin/false bedrijf
# passwd group
```

- add user1 & user2 to groepsnaam

```
# usermod -a -G bedrijf user1
# usermod -a -G bedrijf user2
```

- create samba users

```
# smbpasswd -a user1
# smbpasswd -a user2
```

- set permissions to group

```
# chmod 775 -R /home/bedrijf
# chmod g+s /home/bedrijf (set gid id voor files created in bedrijf)
```

- add share bedrijf to smb.conf

```
[Bedrijf]
path = /home/bedrijf
valid users = user1 user2 (authentication)
guest ok = no
force user = bedrijf (create files)
browsable = yes
writable = yes
read only = no
```
