

VPS / Plesk

SSH issues

SSH public key authentication does not work

Zet de firewall module aan in plesk

1. Go to "Tools & Settings" > "Updates and Upgrades" > "Add/Remove Components",
2. expand "Additional Plesk extensions",
3. enable "Plesk Firewall extension"
4. and click "Continue".

This should install the Firewall for you.

Firewall rule toevoegen / add firewall rule

1. Tools & Settings
2. Onder "Security" klik "Firewall"
3. klik op "Modify Plesk Firewall Rules"
4. klik op "Add Custom Rule"

Maak nu de rule

5. vul een duidelijke omschrijving in bij "Name of the rule"
6. vink bij "Match direction" INCOMING (dat is de standaard) aan
7. vink bij "Action" ALLOW (dat is de standaard) aan
8. vul de port(range) in bij "Add port or port range"
