

# Apache Webserver

## Permalinks in WordPress / CMS

---

### enable mod\_rewrite in apache2.2 (debian/ubuntu)

on current debian system you can enable mod\_rewrite with simple command

```
a2enmod rewrite
```

### Rewriting in Virtual Hosts

By default, mod\_rewrite configuration settings from the main server context are not inherited by virtual hosts. To make the main server settings apply to virtual hosts, you must place the following directives in each <VirtualHost> section:

```
RewriteEngine On  
RewriteOptions Inherit
```
